	ļ						!				
Alcohol-involved fatalities	2754	2510	2509	2382	2048	1832	1569	1488	1343	1254	1100
% of total fatalities	50.1	46.6	46.6	46.0	44.1	43.8	37.7	35.3	32.2	31.6	30.0
Alcohol-involved injuries	68816	65033	23937	63847	55779	48969	42936	39437	36961	35654	31189
% of total injuries	19.1	18.2	17.6	17.5	15.9	14.5	13.6	12.5	12.1	11.9	10.9

¹These totals were reported by the Department of Justice, Criminal Justice Statistics Center, and include a small number of duplicates (0.9% in 1997).

²These data represent a DMV master file count of the number of DUI abstracts received (by year of violation), minus duplicates. These totals do not include conviction abstracts not yet received. Thus, for the most recent years, these figures will substantially underestimate the final conviction totals.

These data include a projected number of abstracts not yet received. This number is based on an empirically derived function of the court abstract reporting rate.

⁵Since 1991, total mandatory suspension/revocation exceeds the number of DUI arrests because many offenders now receive both an APS and postconviction suspension/revocation. ⁴These totals were taken from the DMV annual Suspension and Revocation reports and include late reporting of convictions from prior years.

⁶This estimated final conviction rate has been adjusted for arrest data known to be missing.

^rRevised from prior reports.

 $^{^{\}rm r}_{\rm r}$ Revised from prior reports. $^{\rm *This}$ spuriously low count is due to workload reporting processes.

HIGHLIGHTS OF 1999 CALIFORNIA DUI-MIS REPORT

- Alcohol-involved traffic fatalities declined by 12.3% in 1997, and have dropped by 60.1% since 1987.
- DUI arrests declined by 5.3% in 1997, following a 1.4% increase in 1996. Since 1987, DUI arrests have dropped by 44.7%.
- The number of persons injured in alcohol-involved accidents declined by 12.5% in 1997 (the eleventh consecutive year of decline). Since 1987, alcohol-involved injuries have dropped by over half (54.7%).
- 12.6% of all 1996 DUI arrests were associated with a reported traffic accident, compared to 12.4% in 1995, 13.2% in 1994 and 13.1% in 1993. Almost half (47.5%) of these accidents involved an injury or fatality.
- The average blood alcohol concentration (BAC) of a convicted DUI offender, as reported by law enforcement on APS forms, was .164% in 1996, which is more than double the California illegal per se BAC limit of .08%.
- Among 1997 DUI arrestees, Hispanics (44.2%) again constituted the largest racial/ethnic group, and were arrested at a rate substantially higher than their estimated 1997 percentage of California's adult population (30.4%). The ethnic distribution among those convicted closely parallels the distribution profile of the arrestees.
- The average age of a DUI offender in 1997 was 33.8 years. Less than 1% of arrested DUI offenders are juveniles (under age 18).
- Among convicted DUI offenders in 1996, 70.2% were first offenders and 29.8% were repeat offenders (one or more prior convictions within the previous 7 years). The proportion of repeat offenders has decreased slightly each year since 1989, when it stood at 37%.
- 18.4% of 1996 DUI arrest cases did not show any corresponding conviction on DMV records. This is an increase from 16.3% in 1995, and reverses three years of improvement in this rate.

- Alcohol treatment, in conjunction with license restriction, continued to be the most effective postconviction sanction in reducing subsequent DUI incidents among DUI offenders.
- Second offenders assigned to ignition interlock, in addition to license suspension and alcohol treatment, showed a significantly lower 1-year DUI incident rate than other sanction groups. Given the cost of interlock, however, the possibility of a self-selection bias must be considered. Also, the effects of interlock did not appear in the 3-year follow-up.
- DUI recidivism rates have declined by 44% to 55% since 1990, regardless of sanction group.
- The proportion of second offenders reinstating their driver license within 3 years of being eligible for reinstatement was only 16.4% for 1993 second offenders, compared with a 50% reinstatement rate for such offenders in 1976, the last time this rate was measured.

ACKNOWLEDGMENTS

The authors acknowledge with appreciation the many individuals who have contributed to the success of this project. In particular, we wish to acknowledge the cooperation of the Department of Justice, Criminal Justice Statistics Center, in providing annual DUI arrest data and documentation. The contributions of Debbie McKenzie, Associate Government Program Analyst, in transforming mainframe computer files into readable data tables and figures, as well as her general assistance in the production of this report, are acknowledged with appreciation. We also would like to acknowledge the contributions of Patrice Rogers, Research Program Specialist I, Pat Timmons, Staff Programmer Analyst, and the administrative direction and report review efforts of Raymond C. Peck, Chief, Research and Development Branch.

Report Authors:

Helen N. Tashima, Research Program Specialist I, Principal Investigator Clifford J. Helander, Research Manager I, Project Manager

INTRODUCTION

This report is the eighth Annual Report of the California DUI Management Information System, produced in response to Assembly Bill 757 (Friedman), Chapter 450, 1989 legislative session (see Appendix A). This bill required the Department of Motor Vehicles (DMV) to "establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted" of DUI in order to provide "accurate and up-to-date comprehensive statistics" to enhance "the ability of the Legislature to make informed and timely policy decisions." The need for such a data system had long been documented by numerous authorities, including the 1983 Presidential Commission on Drunk Driving. In responding to this legislative mandate, this report combines and cross-references DUI data from diverse sources and presents them in a single reference. Data sources drawn upon include the California Highway Patrol (CHP) for accident data, Department of Justice (DOJ) for arrest data, and the DMV driver record database. Each of these reporting agencies, however, initially draw their data from diffuse primary sources such as individual law enforcement agencies (arrest and accident reports) and the courts (abstracts of conviction).

The general conceptual design of the California DUI management information system (DUI-MIS) is presented in Figure 1. The basic theme of the DUI-MIS is to track the processing of offenders through the DUI system from the point of arrest and to identify the frequency with which offenders flow through each branch of the system process (from law enforcement through adjudication to treatment and license control actions). Figure 1 also illustrates the relationship between offender flow and data collection at each point of the process. The initiating data source for the DUI-MIS is the DUI arrest report, as compiled by the DOJ Law Enforcement Information Center's Monthly Arrest and Citation Register (MACR) system.

Another major objective of this report is to evaluate the effectiveness of court and administrative sanctions on convicted DUI offenders. This is accomplished by examining the postconviction recidivism records (alcohol/drug-related accidents and traffic convictions) of offenders assigned to alternative sanctions, as detailed in Section 4 on "Postconviction Sanction Effectiveness."

Figure 1. DUI management information system.

It should again be noted that it is not an objective of this report to make recommendations based on the data presented. Rather, the primary purpose of a reporting system such as the DUI-MIS is to provide objective data on the operating and performance characteristics of the system for others to assess in making policy decisions, formulating improvements and conducting more in-depth evaluations.

The DUI-MIS data system and report has led to numerous improvements in the California DUI system, from the identification of inappropriate dismissals in a small central valley court to major initiatives to improve the tracking and reporting of DUI cases. The success of the California DUI-MIS has also contributed to a national initiative to design a model DUI reporting system, developed under contract to the National Highway Traffic Safety Administration (NHTSA).

SECTION 1: DUI ARRESTS

The information presented below on DUI arrests is based primarily on data collected annually by the Department of Justice (DOJ), Law Enforcement Information Center, Monthly Arrest and Citation Register (MACR) system. These data are the most current nonaggregated data available on DUI arrests.

<u>Table 1: DUI Arrests By County and Annual Percentage Change from 1995-1997</u>. The number of DUI arrests by county for the years 1995-1997 and the percentage changes from 1996 to 1997 are shown in Table 1.

<u>Table 2: 1997 DUI Arrests by County and Type of Arrest.</u> This table shows a breakdown of 1997 DUI arrests by felony, misdemeanor, and juvenile arrest type, by county. This table also shows county and statewide DUI arrest rates per 100 licensed drivers.

<u>Tables 3a-3b: 1997 DUI Arrests by Age, Sex, and Race/Ethnicity</u>. Table 3a crosstabulates age by sex and age by race/ethnicity of 1997 DUI arrestees statewide. The same tabulations by county are found in Appendix Table B1. Table 3b shows the same data crosstabulated by sex and age within race/ethnicity.

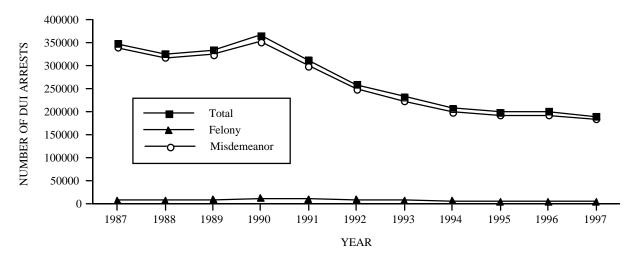

Figure 2 . DUI arrests 1987-1997.

Based on the data shown in Figure 2 and Tables 1, 2, 3a, and 3b, the following statements can be made about DUI arrests in California:

Statewide Parameters:

- DUI arrests decreased by 5.3% in 1997, following a 1.4% increase in 1996.
- The per capita DUI arrest rate was 0.9 in 1997, which represents a 50% reduction over the 1.8 rate in 1990.
- Felony DUI arrests (involving bodily injury or death) constitute a relatively small proportion (2.9% in 1997) of all DUI arrests.

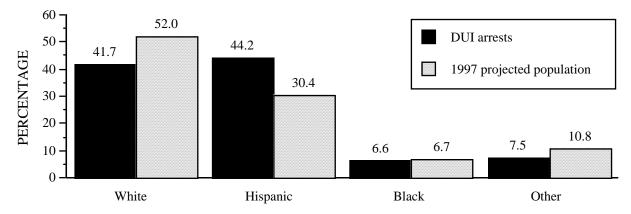

County Variation:

- 25.8% of all 1997 California DUI arrests occurred in Los Angeles County. Four counties (Los Angeles, Orange, San Diego, and San Bernardino) had over 10,000 DUI arrests each, accounting for almost half (46.9%) of all arrests.
- The 1997 county per capita DUI arrest rates ranged from 0.3 to 2.5 DUI arrests per 100 licensed drivers. Five counties had rates of 0.7 or below. These low per capita arrest rate counties were San Francisco (0.3), Mariposa (0.5), Alameda, Contra Costa and San Mateo (0.7). Four counties had rates of 2.0 or higher [Imperial (2.1), Colusa (2.4) and Alpine and Trinity (2.5)].
- As in past years, many counties again showed a decline in DUI arrests in 1997. Among the larger counties, the greatest declines occurred in Kern (-18.2%) and Riverside (-14.1%). Among smaller counties, the largest decreases in DUI arrests occurred in Alpine (-52.8%), Mono (-37.9%) and Sierra (-30.2%). Among counties showing increases in DUI arrests were Trinity (40.1%), Modoc (18.2%), Nevada (16.8), and Siskiyou (15.0%).

Demographic Characteristics:

- The average age of a DUI arrestee in 1997 was 33.8 years. Roughly half (45.0%) of all arrestees were age 30 or younger and over three-quarters (75.2%) were age 40 or younger. Less than 1% of all DUI arrests involved juveniles (under age 18). 2.4% of all arrestees were over age 60.
- Males comprised 86.8% of all 1997 DUI arrests.

- Among 1997 DUI arrestees, Hispanics (44.2%) continued to be the largest ethnic group, being arrested at a rate substantially higher than its estimated 1997 population parity of 30.4% (Department of Finance, Demographic Research and Census Data Center). All other racial/ethnic groups were underrepresented among DUI arrestees, relative to their estimated 1997 population parity: Blacks (6.6% of arrests, 6.7% of the population), Whites (41.7% of arrests, 52.0% of the population), and Other (7.5% of arrests, 10.8% of the population). Figure 3 below shows the percentages of 1997 DUI arrests and 1997 estimated census adult population by race/ethnicity.
- Among male 1997 DUI arrestees, 48.0% were Hispanic, 38.1% were White, 6.5% were Black, and 7.4% were "Other." Among female DUI arrestees, 65.5% were White, 19.4% were Hispanic, 7.2% were Black, and 7.8% were "Other." The overrepresentation of Hispanics among DUI offenders is clearly limited to males.
- In the following 6 counties, Hispanics comprised over 60% of those arrested for DUI during 1997: Tulare (72.8%), Imperial (71.6%), Madera (70.9%), Fresno (69.5%), San Benito (68.4%), and Merced (66.6%). In most other counties, the majority of arrestees were White.
- The average age of a DUI arrestee varied considerably by race: Blacks were the oldest with a mean age of 36.2 years, while Hispanics were the youngest, with a mean age of 31.4 years.

<u>Figure 3</u> . Percentage of 1997 DUI arrests and 1997 projected population (age 15 and over) by race/ethnicity.

SECTION 2: CONVICTIONS

Data on convictions resulting from court adjudication of DUI arrests are reported directly to the Department of Motor Vehicles (DMV) on court abstracts of conviction. The following tables compile and crosstabulate these conviction data by demographic, geographic, and adjudicative categories.

<u>Table 4: 1996 DUI Convictions by Age and Sex.</u> This table crosstabulates statewide DUI conviction information by age and sex. Corresponding county-specific conviction data are presented in Appendix Table B2.

<u>Table 5: Matchable 1996 DUI Convictions by Age, Race/Ethnicity, and Sex.</u> This table displays DUI conviction information by age, race/ethnicity, and sex. "Matchable" DUI convictions are those which are traceable to a DUI arrest appearing on the MACR system. Because not all arrests could be matched to an existing record, these conviction totals underestimate the total number of actual convictions.

Table 6: Adjusted 1996 DUI Conviction Rates and Relative Likelihood of Conviction, by Age and Race/Ethnicity. This table shows the relative probability of a DUI arrest leading to a DUI conviction, by age and race/ethnicity. DUI conviction totals from categories in Table 5 ("matchable DUI convictions") were increased by the proportion which matchable convictions constituted of "total DUI convictions," shown in Table 7, to arrive at the adjusted DUI conviction rates. Without this adjustment DUI conviction rates would be underestimated using the conviction data from Table 5 because not all reported convictions are "matchable" to an arrest.

Table 7: Total Conviction Data for 1996 DUI Arrestees. This table portrays county and statewide DUI-related conviction data as reported to the DMV on court abstracts of conviction. Corresponding court-specific data are shown in Appendix Table B3. Convictions not reported to DMV are considered nonconvictions for the purposes of this report. Actual nonconvictions include cases where the DUI arrest was not filed, not prosecuted, or resulted in a not guilty verdict. The DUI conviction rates by county were calculated by comparing the county conviction totals with DOJ arrest totals. Because not all 1996 DUI arrests have yet been adjudicated, these conviction totals and rates will slightly underestimate the "final" figures. The DUI conviction rates shown in the "DUI Summary Statistics: 1987-1997" table at the very beginning of this report include an estimate of these late convictions, and thus are slightly higher than those shown in

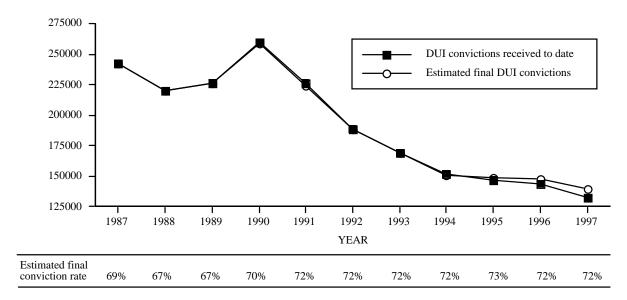

Tables 7 and 8. Conviction variables include felony and misdemeanor DUI convictions, alcohol- and nonalcohol-related reckless driving convictions, convictions of "other" lesser offenses, and DUI convictions dismissed or found unconstitutional. DUI arrest dates from the DOJ MACR system were matched to driver record violation dates to identify nonalcohol-related reckless driving and "other" convictions. The average (mean) adjudication time lags from DUI arrest to conviction, and from conviction to update on the DMV database, were calculated for each county.

Table 8: Adjudication Status of 1996 DUI Arrests by County. This table shows the adjudication status (court disposition) of 1996 DUI arrests, by county. Included are the percentages of arrests which have resulted in DUI convictions (misdemeanor or felony), reckless driving convictions (alcohol-related or nonalcohol-related), convictions of "other" offenses, or no reported conviction, as of the date of writing. Again, because not all 1996 DUI arrests have yet been adjudicated, these rates will slightly underestimate the "final" rate for each category, excepting the category "no record of any conviction," which will be slightly reduced (approximately 1-2%) by the eventual adjudication of these few late cases.

Table 9a: 1996 Reported Blood Alcohol Concentration (BAC) Levels of DUI Convictions and Table 9b: 1996 Reported Blood Alcohol Concentration (BAC) Levels of the Preliminary Alcohol Screening Test (PAS). Table 9a shows the frequency of reported positive BAC levels for DUI and alcohol-reckless convictions. Because of more complete reporting of BAC levels on APS reporting forms (68%), those reports are used to calculate statewide BAC levels. Abstracts of conviction, which were used in prior evaluations, report BAC levels in only 49% of cases. Table 9b shows the BAC distribution of arrested minors given the PAS.

<u>Table 10: 1996 DUI Convictions by Offender Status and Average Reported BAC Level</u>. This table displays the proportions of convicted DUI offenders by offender status (number of prior convictions in seven years), and the average (mean) BAC level from APS reporting forms and abstracts of conviction, for each offense level.

Figure 4 (below) shows, for the years 1987 to 1997, the number of DUI abstracts received to date by DMV from the courts, the estimated final number of DUI convictions which will ultimately be received, and the estimated final DUI conviction rate.

Note. Estimated DUI convictions = see footnote 3 to "DUI Summary Statistics: 1987-1997."

<u>Figure 4</u>. DUI abstracts received by DMV and DUI conviction volume and rate estimates, 1987-1997.

Based on these data, the following statements can be made:

Statewide Adjudication Parameters:

- The estimated DUI conviction rate for 1997 is the same as for 6 of the last 7 years (72%).
- 9.2% of 1996 DUI arrests resulted in reckless driving convictions, and 18.5% of these
 were not correctly identified as alcohol-related. Both of these rates are slightly
 higher than corresponding rates for the previous three years.
- 2.2% of 1996 DUI arrests have resulted in convictions of offenses other than DUI or reckless driving, down very slightly from the rates of the previous three years.
- 18.4% of 1996 DUI arrests have not yet resulted in any conviction on DMV's records, compared to 16.3% in 1995, 18.0% in 1994, 18.8% in 1993 and 19.2% in 1992. As additional cases are adjudicated and reported by the courts, this figure will decrease slightly.
- The average reported BAC level for all convicted DUI offenders in 1996, using APS reporting forms as the data source, was 0.164%, which is slightly lower than previous years, yet still more than double the illegal per se BAC limit of 0.08%.

- Average BAC levels increase as a function of the number of prior DUI convictions, from a 0.160% BAC for a first offense to a 0.185% BAC for a fourth or subsequent offense.
- Among 1996 convicted DUI offenders, 70.2% were first offenders, 22.1% were second offenders, 5.7% were third offenders, and 2.0% were on their fourth or more offense. (The statutorily defined time period for counting priors in California is seven years.) The proportion of repeat offenders (29.8%) among all convicted DUI offenders has decreased slightly each year since 1989 (at which time 37% of all convictions were repeat offenses).
- The average adjudication time lags were 2.8 months from DUI arrest to conviction and 3.1 months from conviction to update on the DMV database, totalling almost 6 months from arrest to update on the offender's driving record. This time lag is identical to last year's.

Variation by County:

- Among the larger counties, 1996 DUI conviction rates varied from highs of 85.1% in Orange and 84.1% in Ventura to a low of 38.9% in San Bernardino. Los Angeles County, which accounted for almost 25% of all DUI arrests in the state, had a DUI conviction rate of 71.8%.
- Among the smaller counties, 1996 DUI conviction rates varied from highs of 87.5% in Nevada and 87.2% in Napa to a low of 36.3% in Yolo.
- The rates at which DUI arrests were plea-bargained to alcohol-related reckless driving convictions varied from over 28% in Alpine County to 0% in Marin and Ventura counties.
- The percentage of DUI arrests that were improperly adjudicated as nonalcohol-related reckless driving convictions varied from 0% to 7.2%. Three counties had rates of 4% or more: Sacramento, Sierra, and San Francisco.
- The percentage of DUI arrests adjudicated as minor convictions ("other" convictions) varied from 0% to 5.6%. San Luis Obispo, Los Angeles, Alameda, Kern, and San Bernardino counties had rates of 3% or more.

• In nine counties, the proportion of arrestees not showing a conviction of any offense exceeded 30%. These counties were Yolo, San Bernardino, Sutter, Trinity, Fresno, Riverside, Imperial, Sierra, and Modoc. Eighteen counties had nonconviction rates of less than 10%, with Nevada and San Benito at less than 2%.

Variation by Court:

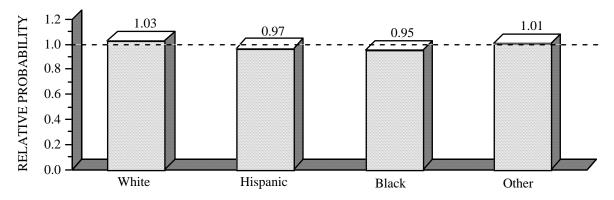

- As was true for prior years, the 1996 superior court time lags were generally longer than municipal court time lags, presumably due to the type of DUI case (felony) being adjudicated.
- Municipal court time lags from arrest to conviction (for courts with more than a
 handful of reported convictions) varied from a high of 5.0 months in the Hemet
 (Riverside County) court to a low of 1.3 months for the King City (Monterey) and
 Los Angeles Metro courts. The Los Angeles Metro court is also the busiest court in
 the state.
- Statewide, the proportion of reckless driving convictions (alcohol and nonalcohol), relative to all convictions resulting from DUI arrests, was about 11% in 1996 (as it was in 1994 and 1995). Among the courts which substantially exceeded this statewide average was Garberville (Humboldt), which adjudicated 36% of its convictions in DUI cases as reckless driving.
- Statewide, 18% of all DUI-related reckless driving convictions are designated as nonalcohol. In Riverside County, however, the Superior Court reported 88% (160 out of 182) of its DUI-related reckless driving convictions as nonalcohol.

Demographic Characteristics:

- The average age of a convicted DUI offender in 1996 was 34.5 years.
- 41.9% of 1996 DUI convictees were aged 30 years or younger and 74.2% were 40 years or younger.
- Females comprised 13.1% of all 1996 convicted DUI offenders, compared to 12.8% in 1995, 12.2% in 1994, 12.3% in 1993, 12.1% in 1992, 12.2% in 1991, 11.7% in 1990, and 11.4% in 1989.
- The racial/ethnic distribution of 1996 DUI convictions (White = 44.0%; Hispanic = 44.1%; Black = 6.2%; Other = 5.7%) generally paralleled that of 1996 arrests, although

(Adjusted

Whites and Others were somewhat more likely to be convicted of the offense (as shown in Figure 5 below).

<u>Figure 5</u> . Relative likelihood of conviction by race/ethnicity. conviction rate by ethnicity ÷ overall conviction rate.)

¹Conviction data by court are found in Appendix Table B3.

 $^3\mathrm{These}$ may include dismissals of prior failure to appear (FTA) abstracts.

²This year's count includes misdemeanors which carried a felony disposition code. These counts do not include 4th offenses (in seven years) which are statutorily defined as felonies.

⁴These 1996 arrestees showed prior DUIs declared unconstitutional on their records. The counties reported here are those in which the current DUI conviction occurred and not necessarily those in

which a prior conviction was declared unconstitutional.

⁵The calculation of the conviction rate was based on total arrests including federal DUI arrests (Yosemite National Park) not reported in the DOJ MACR system.

^{*}The source of BAC data is the APS reporting form for convicted DUI offenders, rather than the abstract of conviction for those offenders, which was the data source in prior reports. This change in data source was made because of the more complete BAC reporting on APS forms (68% of total) versus court abstracts (with only 49% showing BAC levels).

3RD DUI	5.7	.179	.179
4TH+ DUI	2.0	.185	.174

SECTION 3: POSTCONVICTION SANCTIONS

Data on court sanctions assigned to convicted DUI offenders were taken from DUI abstracts of conviction for offenders arrested in 1996. Also included are counts of postconviction DMV license actions for selected offender groups, while total counts of all license actions, including administrative per se (APS) license suspensions and revocations, are shown in the Administrative Actions Section. APS actions (effective July 1990) are initiated by law enforcement immediately upon arrest for DUI, and are administered independent of the criminal adjudication process. This section includes the following tables:

<u>Table 11: 1996 DUI Court Sanctions by DUI Offender Status</u>. This table shows the frequency of specific court sanctions statewide by number of prior DUI convictions. The specific court sanctions tallied include percentages of probation, jail, alcohol treatment programs (first offender, SB 38 second offender, and 30-month third offender programs), license restriction, court suspension, and ignition interlock. Crosstabulations of sanctions by county, court, and number of prior convictions appear in Appendix Table B4.

<u>Table 12</u>: 1996 DUI Sanction Combinations by County - First Offenders. This table displays the frequency of commonly assigned court sanction combinations (such as first offender alcohol program plus license restriction) by county for first DUI offenders. License suspensions include both court and DMV postconviction (non-APS) suspensions. The sanction combination groups portrayed in this table, as well as Table 13, were defined according to the conventions described in the "Evaluation Methods and Results" portion of Section 4: "Postconviction Sanction Effectiveness."

<u>Table 13: 1996 DUI Sanction Combinations by County - Repeat Offenders.</u> This table shows the frequency of commonly assigned court sanction combinations by county for second, third, and fourth (or subsequent) DUI offenders. License actions include both court and DMV postconviction (non-APS) license suspensions and revocations.

From the data in these and the Appendix tables, it is evident that the use of alternative sanctions continued to vary widely by county, court, and offender status in 1996. For example:

Statewide Parameters:

• The most frequently applied court sanction among all convicted DUI offenders was probation (96.5%), while the least frequently used court sanction was court license suspension (5.4%). DUI offenders were sentenced to jail in 76.5% of the cases. (However, in many jurisdictions, jail is often served as community service rather than actual jail time.)

Figure 6 (below) graphically displays the statewide data from Table 11 showing the frequency of specific types of court-ordered sanctions among all convicted DUI offenders. Because virtually all offenders receive more than one type of sanction, the cumulative percentage adds to more than 100%.

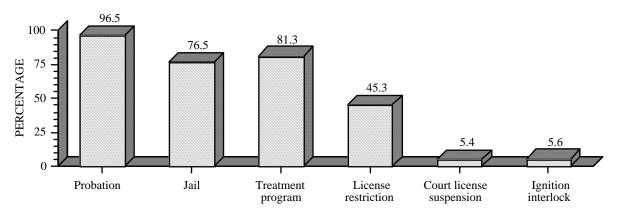

Figure 6. Frequency of court-ordered DUI sanctions (1996).

County Variation:

• The proportion of first DUI offenders sentenced to jail varied by county from less than 10% in Marin County to almost 100% in Amador, Calaveras, Del Norte, Lassen, and Sutter counties.

- Counties such as Amador, Calaveras, Lake, Napa, San Luis Obispo, Sutter, Trinity, and Tuolumne preferred to assign first offenders to treatment program and jail (over 85%) rather than treatment program and license restriction (less than 3%). Humboldt, Inyo, Marin, Orange, Plumas, San Bernardino, and Tehama counties assigned treatment program and jail to less than 6% of their first offenders. Alpine, Inyo, and Orange counties assigned treatment program and license restriction to over 80% of first offenders.
- Counties departing from using typical first offender sanction combinations were Humboldt, Marin, Mariposa, and San Bernardino, as shown by relatively high percentages (over 10%) in the "other" category. ("Other" includes license restriction without treatment program assignment, probation only, and other unofficial nonstatutory sanction combinations.)

Court Variation:

- Statewide, there can be extreme variation by court in the use of available sanctions for DUI offenders. In Lake County alone, one court (Clearlake) assigned jail to every convicted first DUI offender (n = 130), while another court (Lakeport) in the same county did not assign a single first offender to jail (n = 186).
- In Los Angeles County, three municipal courts (Burbank, Compton, and Lancaster)
 used jail as a sanction in 95% or more of their DUI sentences. On the other hand,
 two other courts (Malibu and Culver City) used jail as a sanction in less than a third
 of their DUI sentences.
- In 1996, Los Angeles was the only county with an active 30-month third offender treatment program. Even within the county, however, assignment of third offenders to this program modality varied by court from 27.3% of third offenders sentenced in the Malibu court to 0% of such offenders in the Beverly Hills, Burbank, Culver City, Hollywood, Monrovia, and Southgate municipal courts.
- Although courts required only about 18% of repeat offenders to install the ignition interlock device statewide, the Santa Ana court required over three-fourths of such offenders to use interlock.

Variation by Offender Status:

- Less than 70% of 1996 first DUI offenders were sentenced to jail, compared to over 90% of all repeat offenders.
- 86% of first DUI offenders were assigned to alcohol treatment programs, along with 81% of second offenders, 44% of third offenders, and 19% of fourth or more DUI offenders. (By statute, however, all offenders must eventually complete specified alcohol treatment programs in order to be eligible for license reinstatement.)
- 9.0% of first DUI offenders and 23.0% of second DUI offenders received DMV or court license suspensions after adjudication. Since July 1990, all DUI offenders with BAC levels of 0.08% or more are also subject to 30 days to 1-year administrative license suspension/revocation under the APS law.
- Only 18% of repeat DUI offenders were assigned ignition interlock in 1996, in spite of the mandatory interlock law for all repeat offenders (AB 2851 Freidman), which took effect on July 1, 1993. This law was repealed in 1998, and a new ignition interlock law and program enacted (AB 762 Torlakson) which established mandatory interlock for DUI suspension/revocation violators, while providing incentives for repeat offenders to reinstate early with interlock.

TABLE 11: 1996 DUI COURT SANCTIONS BY DUI OFFENDER STATUS*

DUI OFFENDER STATUS	TOTAL	PROBATION	JAIL	1ST OFFENDER ALCOHOL PROGRAM	SB 38 ALCOHOL PROGRAM	30-MONTH PROGRAM	LICENSE RESTRICTION	COURT SUSPENSION	IGNITION INTERLOCK
		%	%	%	%	%	%	%	%

4TH+ DUI	2773	59.9	93.9	2.0	16.6	0.5	9.0	8.8	4.8

^{*}Entries represent percentages of 1996 DUI convictees receiving each sanction by offender status. Sanctions within each offender status group (row) are not independent; therefore, row percentages always add to more than 100%. Percentages of sanctions by county and court appear in Appendix Table B4.

SECTION 4: POSTCONVICTION SANCTION EFFECTIVENESS

This section presents and describes the results of an evaluation assessing the effectiveness of court and administrative sanctions applied to first and second DUI offenders over a time period of seven years. The effectiveness of alternative sanctions for second offenders is evaluated in terms of postconviction driving record as measured by: 1) total accidents and 2) DUI incidents, including alcohol-involved accidents, major convictions (primarily DUI, also reckless driving and hit-and-run), APS (0.08% BAC or chemical test refusal) suspensions and DUI failure-to-appear notices (FTA). Displayed below in Figures 7 and 8 are proportions of DUI recidivist incidents over time from 1990 through 1996; these proportions were derived from the sanction analyses for first and second offenders (grouped by sanction assignment) from previous DUI-MIS annual reports and are based on follow-up time periods of one year. The reoffense rates of the 1989 offenders were not included in these figures because their postconviction driving records were not comparable to those of subsequent years, given the significant impact of the implementation of the APS suspension law in 1990. There are typically three variants of first offender DUI alcohol education/treatment program sanctions, and these were collapsed together into a single sanction group for ease of viewing and interpretation.

Figures 9 and 10 show the proportion of accident- or DUI incident-involved second offenders for 1994 and 1996, with follow-up time periods of 3 years and 1 year, respectively. The evaluation of first offenders for these years was not reported because, beginning in 1995, statutory requirements for license reinstatement became homogenous for all first offenders: SB 1295 (1/1/95) mandates all first offenders to attend alcohol treatment programs in order to reinstate their driving privilege, and, since 1990, all offenders are suspended upon DUI arrest under the administrative per se license suspension law (APS). However, the evaluation for second DUI offenders is reported because the ignition interlock sanction is not imposed on all second offenders, and its assessment may contribute to clarifying and modifying current sanctioning policy. The figures are followed by a narrative description of the evaluation design, subject selection, data collection, analytical procedures, and evaluation results. In addition, results of tracking the license reinstatement status of a sample of 1993 suspended offenders are reported and compared to a 1976 sample group. The reader is cautioned that license suspension (as assessed in this study) refers to postconviction

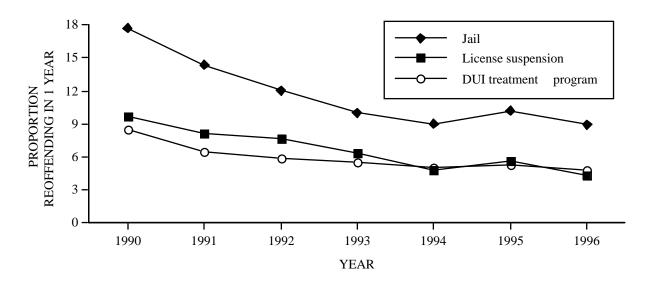

-

¹ Third or more offenders were not included because a previous study (Tashima & Marelich, 1989) indicated serious confounding due to group differences on prior interventions. In addition, sanctions for third and subsequent offenders do not vary much, due to the statutorily prescribed sanction requirements.

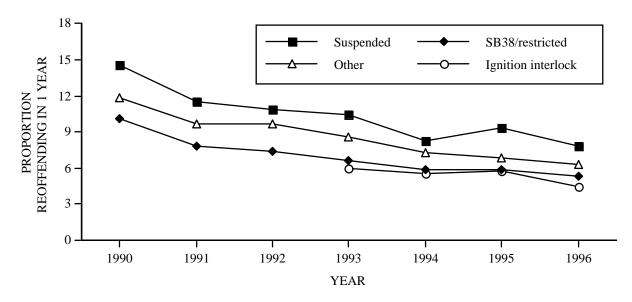

suspensions only, and does not include preconviction administrative per se license suspensions (which are applied to all offender groups).

Based on the data represented in Figures 7 and 8, the following conclusions can be drawn about first and second offender sanctions from 1990 to 1996:

- One-year recidivism rates for all first offender sanction groups declined noticeably from 1990 to 1996, with reductions in DUI reoffenses of 54.8% for the suspended group, 49.3% for the jail group, and 44.1% for the combined first offender DUI treatment groups.
- A similar decline is evident in the one-year reoffense rates for the second offender sanction groups with recividism decreasing (from 1990 to 1996) by 47.6% for the SB 38/license restriction group, 45.9% for the suspended group, and 46.9% for the "other" group.
- The relationship between type of sanction and subsequent reoffense rate has remained relatively constant for first offenders since 1990, with the DUI treatment and license suspension groups exhibiting the lowest reoffense rates and the jail sanction group accumulating significantly higher rates than the other two.

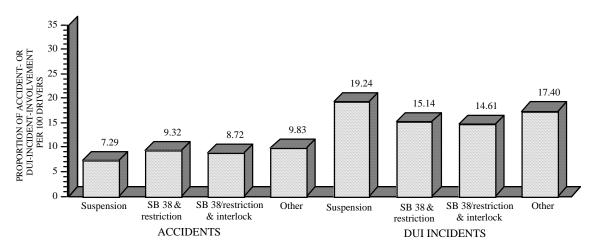

<u>Figure 7</u>. Adjusted proportions of first DUI offenders reoffending within one-year after conviction, by type of sanction (arrested in 1990-1996).

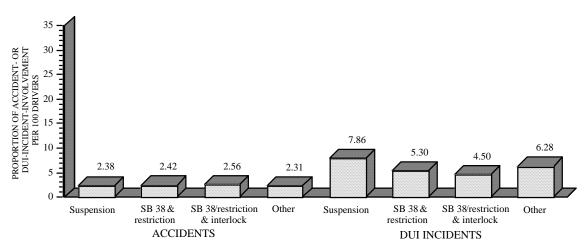

<u>Figure 8</u>. Adjusted proportions of second DUI offenders reoffending within one-year after conviction, by type of sanction (arrested in 1990-1996).

Based on the data represented in Figures 9 and 10, the following conclusions can be drawn about second offender sanctions:

- Consistent with six previous DUI-MIS reports, but contrary to earlier California studies, including the first annual DUI-MIS report (1989 offenders), second offenders suspended in 1996 do not have significantly lower total accident rates than do those offenders assigned to SB 38 treatment programs during the first year following suspension or SB 38 assignment. This finding is likely due to the implementation of administrative per se (APS) license suspensions beginning in July, 1990, whereby all second offenders are suspended for one year. However, for the longer 3-year follow-up period, the 1994 suspended group had significantly lower total accident rates than those of all other second offenders.
- In 1994 and 1996, second offenders who were suspended had a significantly higher proportion of DUI incidents in the subsequent 3-year and 1-year periods than did those who received the SB 38 and license restriction sanction. The respective percentage increases associated with the license suspension group for the two years (1994 and 1996) were 27.1% and 48.3%, respectively.

<u>Figure 9</u>. Adjusted 3-year accident and DUI incident rates of 1994 second offenders by type of sanction.

<u>Figure 10</u> . Adjusted 1-year accident and DUI incident rates of 1996 second offenders by type of sanction.

 In contrast to previous evaluations, the SB 38 program/restriction plus ignition interlock sanction group had a significantly lower 1-year subsequent DUI incident rate than the other 1996 second offender groups, including the SB 38 group without interlock.

Based on the data presented in Table 16, the following conclusion can be made about the reinstatement status of 1993 first and second offenders:

• The tracking of driver license reinstatement status for 1993 DUI offenders receiving a postconviction license suspension or revocation showed the following results:

within three years following the end of their license suspension period, 34.7% of 1993 first offenders (sample) had their licenses reinstated, while only 16.4% of 1993 second offenders (sample) had their driving privilege restored.

EVALUATION METHODS AND RESULTS

Subject Selection and Data Collection

Convicted DUI offenders were identified from monthly abstract update tapes which contain all DUI conviction data reported to DMV by the courts. In the present study, follow-up data for first and second offenders were compiled from six previous and current DUI-MIS evaluations. Additional follow-up data for two sets of second offenders were evaluated for sanction effectiveness:

- 1) A 3-year follow-up period for convicted 1994 second offenders who were previously evaluated in the 1997 DUI-MIS report.
- 2) A 1-year follow-up period for convicted DUI second offenders who were arrested for DUI in 1996.

For each year's annual DUI-MIS report, an additional year of DUI data is added to the sanction analyses. In order to simplify the analyses and reporting of results, the 1989 through 1993 and 1995 DUI offenders were not included in this year's evaluation (except for license reinstatement follow-up on 1993 suspended first and second offenders).

The conviction date in all cases was considered to be the "treatment date" for defining prior and subsequent driving record data, because the penalties and sanctions for the DUI conviction are typically effective as of that date.

Since DUI penalties and sanctions are enhanced as a function of the number of prior DUI and alcohol-related reckless driving convictions within the previous seven years, subjects were selected based on the number of such convictions within the seven years prior to their entry DUI arrest. For this year's report and all previous DUI-MIS reports, subjects selected for evaluation were: 1) first DUI offenders—drivers who had no DUI or alcohol-related reckless driving convictions within the previous seven years, and 2) second DUI offenders—drivers who had one DUI or alcohol-related reckless driving conviction within the previous seven years. DUI offenders with felony convictions and chemical test refusal suspensions were not included because their license control penalties are more severe than those of the other second offender groups. Also

excluded were drivers who did not have a full one-year subsequent time period because of late conviction dates, drivers with "X" license numbers (no California license number could be found), and drivers with out-of-state ZIP Codes. Altogether, the excluded cases represented 21.3% of the original convicted offender file.

Court sanctions are reported to, and recorded by, DMV in the form of disposition codes on the abstract of conviction. A convicted DUI offender, especially a first offender, might receive any one of many combinations of individual sanctions, including jail, fine, license restriction or suspension, alcohol treatment program, or probation. Therefore, in defining postconviction sanction combination groups for the purpose of all previous and current analyses, the following conventions were used for first offenders:

- 1) if suspension (non-APS) was one of the sanctions imposed by DMV or the court, then the offender was included in the suspension group;
- 2) if suspension (non-APS) was not imposed, but the offender was assigned to an alcohol treatment program, then the offender was included in one of the treatment groups, according to the type of treatment program (first offender or SB 38) and whether they were also sentenced to license restriction or jail; and
- 3) if neither suspension nor treatment was imposed, but the offender was sentenced to jail, then the offender was included in the jail-only group.

Fine and probation are generally imposed on most DUI offenders (except that probation is not usually granted to court-suspended first offenders), and for that reason are not included as sanctions evaluated in this report. Also, since July, 1990, virtually all DUI offenders have had their licenses administratively suspended upon DUI arrest.

It should be noted that the definition of the sanction combination groups was not an arbitrary analytical convention, but rather a reflection of the most common naturally occurring sanction combinations assigned by the courts. Based on the above taxonomy, the following five first-offender sanction combination groups were evaluated separately in prior reports: 1) license suspension, 2) jail, 3) first offender treatment program plus jail, 4) first offender treatment program plus license restriction, and 5) SB 38 (second offender) treatment program plus license restriction (some courts assign this sanction to a small number of first offenders). For the 1990-1996 overview analysis presented in this year's report, the three treatment program groups were combined into one group. However, when compared individually, the subsequent driving records of the groups exhibited a very similar pattern as was evident in prior DUI-MIS reports.

A similar convention was used for grouping second offenders with various sanction combinations; the groups used in this analysis are: 1) license suspension, 2) SB 38 treatment program plus license restriction, 3) a group of 1994 and 1996 second offenders ("other") who did not meet the selection criteria of groups 1 or 2, and 4) a fourth group of 1994 and 1996 second offenders who were ordered to install an ignition interlock device in their vehicles as mandated by AB 2851 (implemented July, 1993, but effectively abolished by AB 762, effective July, 1999). This device requires that the offender blow into it prior to starting the vehicle, which will not start if he/she has a BAC above a specified level. This group was identified by certain vehicle code designations on their abstract of conviction. In examining these abstract disposition codes, it was found that 89% of interlock cases were also referred to SB 38 treatment programs (along with license restrictions), while 38% had their licenses suspended (non-APS); of those that were suspended, 72% were assigned to SB 38 treatment programs. All second offenders who were assigned to install interlock are included in this evaluation, irrespective of other sanctions and regardless of actual installation. This is reflective of the "real world" conditions under which interlock is assigned which is an integral part of the total impact of this sanction.²

The group designated as "other" represent offenders who were originally referred to an SB 38 treatment program, but were suspended as well, either by intent (court sentence to both treatment program and suspension), or omission (court misreporting of disposition codes and/or the offender's lack of compliance with required procedures, such as failure to provide proof of insurance, program enrollment, pay fees, etc.). Even if the courts amend the abstracts of conviction, the offenders still need to meet the insurance and program enrollment requirements. The final sanctions ultimately received by this group are unclear, which makes interpretation difficult. This difficulty is further exacerbated by strong self-selection biases, such as inability or unwillingness to obtain insurance.

Prior driver record data were extracted for the two years preceding an offender's DUI conviction date. Appendix Tables B5 and B6 list the prior driver record variables for the second offenders, which were used as covariates in the analyses. The evaluation period for the postconviction driving measures, starting from the conviction date, was three years for the 1994 drivers, and one year for the 1996 drivers. A buffer period of six

_

² It should be noted, however, that a 1993 policy directive from DMV to the courts originally requested that only offenders who had shown proof of installation be reported as assigned to interlock. To the extent that this directive was followed by the courts (and there is evidence that it was not), the present evaluation would be assessing only those cases where the device was actually installed. This DMV policy directive has since been corrected.

months was allowed between the end of the evaluation period and the data extraction date to allow for processing and reporting of the most recent data to DMV. DUI offenders who had less than the full follow-up time period (from conviction date to the buffer period) were excluded. The outcome driving record measures consisted of the proportion of offenders who were involved in: 1) total accidents and 2) DUI incidents (alcohol-involved accidents, major convictions, APS/refusal suspensions, or DUI failures to appear).

For tracking license reinstatement follow-up data, driver record printouts were obtained for 1.5% and 3% random samples of 1993 suspended (postconviction) first and second offenders, respectively. Comparisons of the follow-up data were made between the 1993 samples and the 1976 sample from Sadler and Perrine's (1984) license reinstatement investigation. The follow-up time period for all groups was 3 years after the end of the suspension period. Information on the methodology used to determine license reinstatement in Sadler and Perrine's study was not available, but in this study, the issuance dates following the suspension periods and type of issuance were examined for ascertaining reinstatement status.

Evaluation Design and Analytical Procedures

Logistic regression analysis was used to evaluate the differences in the proportion of accident- and DUI-incident-involved drivers in each sanction group at the end of the evaluation period. Only the first accident or DUI incident or "failure" was evaluated. This is not an important limitation with these data because the incidence of repeat failures (two or more accidents or DUI incidents) was very low over the study time window. More importantly, analysis of repeat failures would be subject to confounding by court sanctions received in connection with the first failure incident. This type of confounding is avoided because multiple incidents were not included in this analysis.

Since it was not possible to randomly assign drivers to the various sanction groups, potential biases due to preexisting group differences were statistically controlled by entering into the analyses as covariates biographical data, prior driving record data, and ZIP Code indices (accident and traffic conviction averages of each driver's ZIP Code area, and selected ZIP Code variables from the 1990 census data for the 1994 and 1996 drivers). (Tables B5 and B6 show significant group differences on most of these variables.) While this "quasi-experimental" design is subject to a number of limitations in assessing cause-effect relationships, the statistical control of group differences removes at least part of the bias in group assignment and provides a more precise estimate of the relationship between type of sanction and subsequent record. It is likely, of course, that the groups also differ on characteristics not measured by, or reflected in,

the covariates. The possibility of uncontrolled biases becomes particularly problematic if sanctions are commonly received by atypical offenders through self- or judicial-selectivity (e.g., drivers of higher socio-economic status might be more likely to receive program with restriction and less likely to receive jail than those of lower status).

In the 1994 second offender analyses for accidents and DUI incidents, one or two significant (p < .01) covariate by sanction interactions were evident (statistical significance at p < x means that a differential effect between groups would occur by chance less than x% of the time). These significant interactions indicated that the relationship between the covariates and the outcome measure varied across sanction groups, and therefore the covariates were included in the initial analyses for all three data sets to determine the magnitude of the interactions. In the 1994 analyses, where sanction differences were significant (p < .06), the interaction effect was generally one-third or less than the main effect of sanction (chi squares were divided by their respective degrees of freedom to provide an approximate measure of effect size). Since the sanction main effect had substantially greater magnitude than the interaction effects, conclusions about sanction differences were based on analyses that did not include the interactions.

One-Year Recidivism Rates for First and Second Offenders, by Sanctions, from 1990 - 1996

The one-year subsequent DUI-incident reoffense rates for both first and second offender sanction groups were compiled from the six previous and current annual DUI-MIS evaluations and configured onto two separate graphs to display these rates over time. Figures 7 and 8 show the proportions of first and second offender sanction groups, respectively, arrested between 1990 and 1996 who reoffended within one year after conviction. As discussed earlier, the reoffense rates of these sanction groups were statistically adjusted for group differences related to available covariates. The DUI incidents include alcohol-involved accidents, major convictions (primarily DUI, reckless driving and hit-and-run), APS (0.08% BAC or chemical test refusal) suspensions and DUI failure-to-appear notices (FTA).

Figure 7 and Table 14 reveal a noticeable decline in the one-year recidivism rates for all of the first offender sanction groups from 1990 to 1996. This overall decline translates into a 54.8% reduction in recidivism for the suspension group, a 49.3% drop for the jail group, and a 44.1% decrease for the alcohol treatment group. Although the recidivism rates of the suspended and DUI program groups appear quite similar, the decline over time for the suspended group is much greater (54.8%) than that of the treatment group (44.1%). Also, in the earlier years, the combined DUI treatment group exhibited lower

reoffense rates than those of the suspended group, possibly due to the initial impact of APS suspensions on a group that previously avoided license suspension. However, midway in 1994, the rates of the two groups merge and the downward trend of both groups diminishes. (These two groups together comprise about 95% of first offenders.) The reoffense rate of the jail group also shows a much sharper decline in the earlier years; again this may reflect the more immediate impact of APS suspensions on a group which, before APS, had neither license actions nor treatment program referral. The more recent years continue to show that first offenders receiving jail perform more poorly than the other sanction groups. This could reflect the fact that jail (or community service) is less effective, but it is also likely that uncontrolled selection biases are operating.

TABLE 14: ONE-YEAR PROPORTIONS OF DUI-INCIDENT INVOLVED FIRST AND SECOND OFFENDERS, BY TYPE OF SANCTION, 1990-1996

	FIRS	ST DUI OFFI	ENDERS		SECOND DUI C	OFFENDERS

1993	6.40	10.03	5.50	10.48	6.62	5.95	8.62
1994	4.78	9.01	5.05	8.27	5.90	5.60	7.24
1995	5.70	10.21	5.31	9.34	5.90	5.78	6.84
1996	4.36	8.97	4.76	7.86	5.31	4.50	6.28
% DIFFERENCE 1990-1996	-54.8%	-49.3%	-44.1%	-45.9%	-47.6%	NA	-46.9%

A similar overall decline is evident in the one-year reoffense rates for the second offender groups as displayed in Figure 8, but the rate of decline is virtually the same for all three groups. Table 14 shows that, from 1990 to 1996, the reoffense rates decreased 47.6% for the SB 38 group, 45.9% for the suspended group, and 46.9% for the "other" group. Obviously, a rate change over the 1990 to 1996 time period is not available for the ignition interlock group since this sanction was not applied to second offenders until 1993; the reoffense rate for this group is slightly lower than that of the SB 38 group. The differences in rates between sanction groups remain relatively steady across the years, and, like the first offenders, may reflect uncontrolled self- or judicial-selection group differences. This is particularly likely for the ignition interlock group, given the cost of installing and maintaining the device. Previous DUI-MIS reports have suggested that, while many factors may be associated with the overall decline in DUI

incidents for both first and second offenders, the reduction is likely attributable to the implementation of APS suspensions in 1990. An evaluation (Rogers, 1997) of the California APS Law, in fact, documents recidivism reductions of up to 21.1% for first offenders and 19.5% for repeat offenders attributable to the law.

Results of the Second Offender Sanction Evaluation

Total Accidents: Results of the 1996 analyses (see Figures 9 and 10, Tables 15a and 15b) were similar to those of the 1990 to 1993 one-year analyses (contained in the previous four DUI-MIS reports) in that significant differences were not evident among second offenders on accidents. It has been noted in previous reports that since license suspension has been consistently effective in reducing accident risk, it was likely that the lack of significant group differences in the one-year period was due to the immediate short-term positive effect of the imposition of one-year APS license suspensions on all second offenders. It was found in the previous four analyses and in this year's analysis that the accident rates of the SB 38 participants have continued to decline. Since the one-year follow-up period covers the time window when all second offenders are under APS suspension, it was reasoned that APS suspension would be expected to have a larger effect on the accident rates of previously nonsuspended SB 38 participants than it did on those who were suspended upon conviction. The data continue to support this interpretation.

In contrast to the 3-year follow-up analyses of the previous 2 reports, significant differences were evident among the 1994 second offenders. The accident rate of the suspended group was significantly lower than that of the other three groups, and the accident rate of the ignition interlock group was significantly lower than that of the "other" group. However, the accident rates between the ignition interlock and the SB 38 groups were not significantly different; this finding was similarly reported in previous 1- and 3-year analyses on accidents involving the ignition interlock group. In order to increase the power of the statistical analysis for detecting the effects of the interlock sanction, an additional analysis was conducted in which the 1-year 1993, 1994, 1995, and 1996 second offender files were combined. Results from this analysis, which are shown in Tables 15a and 15b, are very similar to last year's analysis of 1993, 1994 Differences in accident rates between sanctions were statistically and 1995 data. significant (p = .035). The rates of the SB 38 and ignition interlock groups were significantly lower than those of the suspension and "other" groups; however, the accident rates between the SB 38 and ignition interlock groups were not significantly different (p = .73). In addition, the 3-year subsequent files of the 1993 and 1994 groups were combined and analyzed, but differences in accident rates were not significantly different.

TABLE 15a: SECOND OFFENDER SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

Note: A significant (p < .03 for 1st offenders and p < .06 for 2nd offenders) difference between sanction groups relative to the proportion of accident-involved or DUI incident-involved drivers is represented by an "S." The group number with the "S" indicates the group with the better (lower) rate. A nonsignificant difference is indicated by "ns." "na" means not applicable. Blanks appear in the lower half of each matrix, since the halves are identical.

<u>DUI Incidents</u>: Figures 9 and 10 and Tables 15a and 15b show that, in both years, the suspended groups had significantly higher failure rates (by 27.1% and 48.3% for 1994 and 1996, respectively) than corresponding rates for the SB 38 program participants. The third group ("other") in the 1994 and 1996 analyses had failure rates midway between the suspended and SB 38 groups. Failure rates of all four groups in 1994 were significantly different from each other, except between the interlock and SB 38 groups. The 3-year recidivism rate of the interlock group was significantly lower than that of the suspension and "other" groups.

A notable finding in the 1996 analysis was that the 1-year recidivism rate of the interlock group was significantly (p = .04) lower than that of all three groups. However,

the combined 1993-1996 1-year analyses and the 1993-1994 3-year analyses did not show significant differences in the recidivism rates (p = .15 and p = .70, respectively) between the SB 38 and ignition interlock groups. Note that in all of the four 1-year analyses, both the SB 38 and ignition interlock groups had significantly lower reoffense rates than the suspended or the "other" groups.

In summary, findings from the 1996 second offender analyses were similar to previous post-APS one-year evaluations of second offenders in showing no evidence of significant differences between the sanction groups on subsequent accident rates. In contrast to the findings of the 3-year accident analyses in the last 2 reports, the accident rate of the 1994 suspended group was significantly lower than that of the other groups. The fact that both the 1- and 3-year accident rates are the lowest of all previous accident rates could reflect the ongoing impact of APS suspensions over time, since all second offenders since 1990 are suspended under APS for the duration of the one-year follow-up period.

The results on reoffense rates for second offenders continue to be consistent with the findings of prior studies on alcohol-related incidents, indicating that SB 38 programs with license restriction are associated with a reduction in subsequent DUI incidents over both follow-up periods.

<u>Comparison of DUI Reoffenses and License Reinstatement Between 1975 and 1993</u> <u>Sample DUI Offenders</u>

One aspect of the DUI system that has not been investigated in previous DUI-MIS reports is the extent to which DUI offenders reinstate their licenses at the end of their postconviction suspension period. In order to determine the proportions of offenders who reinstated and reoffended, driver record printouts of two samples of 1993 suspended first and second offenders were reviewed and tallied; these results were then compared to findings reported by Sadler and Perrine (1984) in their investigation of license reinstatement on a sample of 1976 suspended second offenders.

Table 16 displays license reinstatement and reoffense proportions on three DUI suspended sample groups: second offenders from 1976 and 1993, and first offenders arrested in 1993. The length of the suspension period varies for the three groups from 12 months (1976), 18 months (1993 second offenders) and 6 months (or 1 year for under age 18) for the 1993 first offenders receiving a postconviction license action. The time period for tracking the reinstatement data was 3 years after the end of the suspension period for all three groups.

TABLE 16: PROPORTIONS OF DUI REOFFENSES AND LICENSE REINSTATEMENT FOR 1993 AND 1976 DUI OFFENDER SAMPLE GROUPS

		AMPLE ENDED	1976 SAMPLE SUSPENDED
	1ST OFFENDERS (N = 84)	2ND OFFENDERS (N = 201)	2ND OFFENDERS (N = 800)
Suspension period	6 mo - 1 yr	18 mo	12 mo
Time period after end of suspension	3 yrs	3 yrs	3 yrs
Proportion reoffending during suspension period	14.3%	11.5%	Unknown
Proportion of eligible drivers (no DUI during suspension period) reoffending within 3 years after end of suspension period	11.1%	11.3%	10%
Proportion of eligible drivers (no DUI during suspension period) reinstating within 3 years after end of suspension period	34.7%	16.4%	50%
Proportion reinstated 3 years after end of suspension	12.5%	6.2%	Unknown

Although the proportion of DUI reoffenses during the suspension period for the 1976 group was not reported, the proportions for the 1993 first and second offender groups were 14.3% and 11.5%, respectively. Within the three years after the end of suspension, the three sample groups had very similar proportions of reoffenses during this period of time (11.1%, 11.3% and 10%). However, the proportions of eligible drivers who had their licenses reinstated were quite different for each of the sample groups; Sadler & Perrine reported that 50% of their eligible offenders were reinstated during the 3-year period, while only 16.4% of the 1993 second offenders were reinstated. A larger proportion, 34.7%, of eligible 1993 first offenders were reinstated, which might be expected, given that the feasibility of obtaining insurance is probably better with a single DUI offense than for two offenses. Nevertheless, the proportions of 1993 first and second offenders reinstating are quite low compared to the 1976 sample, particularly considering that in 1993, first and second offenders were not required to show completion of treatment program attendance as a condition for license reinstatement. The law requiring proof of completion of an alcohol treatment program for second offenders was effective 1/1/94 (SB 126) and for first offenders 1/1/95 (SB 1205). However, since 1990, an additional requirement for reinstatement is that all offenders must pay the APS reinstatement fee of \$100; this is the maximum fee and any other

postconviction reinstatement fees above \$100 do not have to be paid (except drug violation and restriction fees).

Both the 1976 and 1993 offenders had to maintain proof of insurance for 3 years to keep their driving privilege. It may be possible that rather than conform to the requirements of license reinstatement, these drivers chose to take the risk of driving without a license because such violations have traditionally not been readily cited, enforced nor heavily punished. Another DMV study (DeYoung, 1997) evaluated the effectiveness of the impoundment of cars owned by suspended/revoked and unlicensed drivers, and found a significant reduction in crashes and traffic convictions among drivers whose vehicles were impounded. An additional possible explanation for the large difference in the proportions of offenders reinstating in 1976 compared to 1993 is that the methodology used for determining reinstatement may have been different for the two investigations. In the 1976 analysis, the reinstatement date was used to determine reinstatement status, whereas in the 1993 evaluation the application/issuance date was used. The reinstatement date determines eligibility for reinstatement, but the application/issuance date indicates that the license is, in fact, valid. Sometimes the two dates are identical.

In reviewing the records of 1993 offenders who had not reinstated, it was apparent that these offenders had not met the requirement of paying the APS reinstatement fee (\$100). The likelihood of not paying the fee is probably related to the difficulty and expense in obtaining insurance and maintaining it for three years. However, after the license action is terminated (in 3 years), and if there are no other suspensions or unpaid fees, DUI offenders are able to reinstate without showing proof of insurance. Table 16 shows that the proportions of 1993 offenders who reinstated beyond the 3-year review period are still somewhat small (12.5% and 6.2%, of first and second offenders, respectively). As mentioned earlier, it is possible that DUI offenders are giving up on license reinstatement efforts, due to cost factors and a perception that detection is unlikely. This raises concern about DUI offenders continuing to drive without licensure, thereby increasing traffic safety risk. A recent paper (DeYoung, Peck & Helander, 1998) on unlicensed drivers reported that 8.8% of drivers on the road had suspended or revoked licenses and an additional 3.3% had no record of any driver's license. The study also found that suspended/revoked drivers are 7.8 times more likely to be the cause of a fatal crash than are drivers with valid licenses when both parties are involved in such accidents. These findings support the fact that driving without a valid license poses a serious traffic safety risk, and that ongoing and additional intervention efforts should be applied in order to further curtail the incidence of driving without a license.

SECTION 5: ADMINISTRATIVE ACTIONS

Data on DMV administrative license disqualification actions (license suspension or revocation—S/R) taken in DUI cases are presented below. These statutorily mandated actions are initiated by the receipt of either a law enforcement APS report (.08% BAC, zero tolerance, or chemical test refusal) or court abstract of conviction. It should be noted that multiple actions can result from a single DUI incident—for example, a single DUI arrest frequently will result in both an APS suspension and a mandatory postconviction suspension action. This section includes the following tables and figure:

<u>Table 17: Mandatory DUI License Disqualification Actions, 1987-1997</u>. This table shows preconviction (APS) and postconviction license disqualification totals from 1987 through 1997. The postconviction totals include juvenile suspensions, first-offender suspensions, second-offender suspensions and revocations, and third- and fourth-offender revocations.

<u>Table 18: Administrative Per Se Process Measures.</u> This table presents APS process measure data for fiscal years 95/96 through 97/98.

Figure 11 graphically portrays mandatory DUI license disqualification totals from 1987 through 1997.

The following statements are based on the data shown in Tables 17-18 and Figure 11.

- During 1991, the first full calendar year of APS license suspension, the total number of DMV DUI pre- and postconviction suspension/revocation actions increased by 60% over 1990. Each year since then (with the exception of 1996) these numbers have declined, by an overall 45%. The decline in 1997 totals (from 1996) was 11%.
- In 1997, 169,511 APS license actions were taken. Of these actions, 74% were first-offender actions and 26% were repeat-offender actions.

- In FY 97/98, APS actions decreased by 3.3%, following a 3.9% decrease the previous fiscal year.
- Chemical test refusal actions dropped by 12.1% in 1997, following a 1.3% decline in 1996. The total number of refusal actions have fallen 51% below the 1991 totals.
- The number of mandatory postconviction license actions decreased by 29.5% in 1997, and is 64% lower than in 1991.
- In the first eight years since APS was implemented in July 1990, over one and three-quarters million (1,753,089) APS suspension or revocation actions had been taken.
- Requests for APS hearings have increased from 7.1% of all APS actions in FY 90/91 to 18.2% in 97/98. The rate at which APS suspension/revocation actions are upheld after hearing has risen to 80.1% in 97/98, after falling to only 67% in 95/96.
- During the first 4.5 years after implementation (on January 1, 1994) of the "zero tolerance" law for minors, 45,958 suspension actions were taken.

.01 actions sustained or upheld following a hearing .01 hearing action sustain/upheld rate	62.4%	68.8%	83.0%
APS Chemical Test Refusal Hearings	02.4 /0	00.0 /0	03.0 /0
Total .08 and .01 APS refusal hearings scheduled	2,590	2,797	2,563
.08 APS refusal hearings held and/or completed	2,394	2,635	2,450
.08 APS refusal actions sustained or upheld following a hearing	1,639	1,840	1,873
1— — — — — — — — — — — — — — — — — — —	1,007	1,010	1,010

¹Figures have been adjusted from prior reports for FY 94/95 through FY 96/97 to account for previously overcounted total actions (resulting from duplication among stayed cases), and undercounted hearings (resulting from excluded stayed cases). Copies of corrected past reports are available upon request.

².08 refers to APS actions taken subsequent to obtaining evidence of a BAC equal to or in excess of the .08% per se level or on the basis of a chemical test refusal. Such an action is taken in conjunction with a DUI arrest.

³.01 refers to APS suspensions taken against drivers under the age of 21 with BACs in excess of .01%, or on the basis of a chemical test refusal, and are not necessarily taken in conjunction with a DUI arrest.

⁴All entries in this category exclude actions later set aside but, where possible, include actions taken on the basis of either a chemical test refusal or a BAC test result. This category does not include .01 actions, which are not varied by offender status or license class.

⁵Prior DUI convictions consist of any such conviction where the violation occurred within seven years prior to the current violation.

⁶Introduced 1/1/95 this restriction allows driving to, from, and during the course-of-employment.

⁷This figure excludes subsequent APS dismissal hearings and departmental review hearings or procedures. Both numerator and denominator include those actions later set aside as a result of the hearing.

SECTION 6: ACCIDENTS INVOLVING ALCOHOL

This section presents data on alcohol-involved accidents, as compiled and reported by the California Highway Patrol, as well as accident data which have been crosstabulated with Department of Justice DUI arrest data. Only accidents involving injury or fatality are assessed, due to incomplete reporting on property-damage-only (PDO) accidents.³ Drivers identified as being under the influence of drugs other than alcohol are also included in the "alcohol-involved accident" category, but typically comprise less than 1% of the total (only 3 total cases for 1994 data). This section includes the following tables:

<u>Table 19: Fatal/Injury Accidents of 1996 DUI Arrestees by Race/Ethnicity and Sobriety Code</u>. This table shows the law enforcement officer's determination of sobriety for accident-involved 1996 DUI arrestees, by race/ethnicity.

<u>Table 20: Fatal/Injury Accidents of 1996 DUI Arrestees by Race/Ethnicity and Type of Arrest.</u> This table portrays the fatal/injury accident involvement of DUI arrestees, by race/ethnicity and type of arrest (felony, juvenile, or misdemeanor).

<u>Table 21: Fatal/Injury Accidents of 1996 DUI Arrestees by Adjudication Status and Sobriety Code.</u> This table crosstabulates accident sobriety codes (from law enforcement accident reports) with the court disposition of the 1996 DUI arrests associated with those accidents.

<u>Table 22: Fatal/Injury Accidents of 1996 DUI Arrestees by Type of Arrest and Adjudication Status</u>. This table displays the adjudication status of fatal and injury accident-involved 1996 DUI arrestees, by type of arrest.

<u>Table 23: 1996 Accident-Involved DUI Arrestees With No Record of Conviction, by County and Type of Arrest.</u> This table shows the number of accident-involved 1996 DUI arrestees without a corresponding recorded conviction, by type of DUI arrest, by county.

<u>Tables 24a-24b: 1996 Alcohol-Involved Fatal/Injury Accidents by Age and Sex</u> (Total and Not Arrested). These two tables show the number of 1996 alcohol-involved fatal

³ Among 1996 DUI arrests, 25,685 were associated with a reported traffic accident, with 12,198 involving an injury or fatality, and 13,487 being PDO.

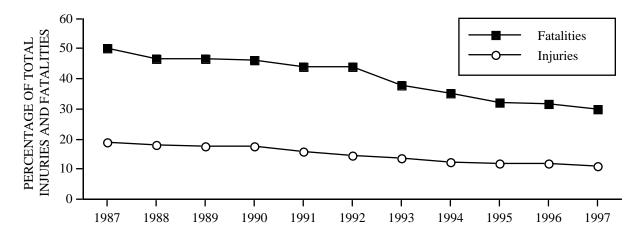

and injury accidents by age and sex, both total (24a) and for subjects who were not arrested in conjunction with the accident (24b).

<u>Tables 25a-25b:</u> Sobriety Level by Prior DUI Convictions of 1996 Alcohol-Involved <u>Fatal/Injury Accidents</u> (Total and Not Arrested). These two tables show the number of 1996 alcohol-involved fatal and injury accidents by sobriety level and prior conviction status, both total (25a) and for subjects who were not arrested in conjunction with the accident (25b).

<u>Tables 26a-26b: 1996 Alcohol-Involved Fatal/Injury Accidents by Prior DUI Convictions</u> (Total and Not Arrested). These two tables show the number of 1996 alcohol-involved fatal and injury accidents by number of prior convictions, both total (26a) and for subjects who were not arrested in conjunction with the accident (26b).

<u>Table 27: 1-, 3-, and 7-Year Total, Fatal/Injury, and Alcohol-Related Accident Means by Offender Status</u>. This table shows the average number of total, fatal/injury, and alcohol-related accidents for 1996, 1994, and 1989 DUI arrestees for time periods of 1, 3, and 7 years subsequent to their arrests, respectively, by offender status (number of prior offenses).

Figure 12 (below) shows the annual percentages of traffic injuries and fatalities that were alcohol-involved from 1987 to 1997. The numerical data for this graph are shown on the DUI summary statistics sheet at the beginning of this report.

<u>Figure 12</u>. Percentage of total injuries and total fatalities that were alcoholinvolved, 1987-1997.

Based on these data, the following statements can be made:

- The number of alcohol-involved traffic fatalities dropped 12.3% in 1997, and has declined by 60% since 1987. The proportion of fatalities which are alcohol-involved has declined from 50.1% in 1987 to 30.0% in 1997.
- The proportion of traffic accident injuries that are alcohol-involved has also declined each year since 1987. Alcohol-involved injuries dropped 12.5% during 1997 and 54.7% from 1987 to 1997.
- 12.6% of all 1996 DUI arrests were associated with a reported traffic accident, compared to 12.4% in 1995, 13.2% in 1994, 13.1% in 1993, and 11.1% in 1992 and 1991. 47.5% of these accidents involved an injury or fatality.
- In almost a quarter (23.3%) of cases where a DUI offender was arrested in connection with a reported traffic accident, there is no record of any corresponding conviction. In 91.2% of these nonconvicted cases, the accident report indicated that the drivers had been drinking and that their ability was impaired.
- Of all 1996 accident-involved DUI arrestees with no record of conviction, 17.7% had been arrested for felony DUI.
- 6.0% (12,198) of 1996 DUI arrests were associated with a fatal or injury accident. Of these fatal/injury accidents, only 28.8% (3,519) led to an arrest for felony DUI, and only 9.3% (1,135) led to a conviction of felony DUI. Approximately 75% of DUI arrests stemming from a fatal/injury accident resulted in a reported conviction.
- The fatal/injury and total accident risk of DUI offenders generally decreases with the number of prior DUI convictions for periods up to five years after arrest, while, conversely, the risk of involvement in an alcohol-related accident generally increases with number of priors over the same time periods. This is not surprising because as the number of prior DUIs increases, the time period of the suspension/revocation lengthens, and prior research has demonstrated that suspension/revocation has a larger impact on reducing non-DUI accidents than DUI accidents. In addition, drivers with multiple DUI offenses are more likely to have serious drinking problems.

- Drivers in alcohol-involved fatal/injury accidents in 1996 were less likely to be arrested for an associated DUI offense if they were under age 30, over age 70, or female (of any age).
- Non-arrested drivers in alcohol-involved fatal/injury accidents in 1996 were less likely to have a prior conviction for DUI or alcohol-related reckless driving, and had lower estimated BAC levels than were drivers who were arrested in conjunction with the accident.
- Over 70% of drivers in alcohol-involved fatal accidents had no prior DUI or reckless driving conviction.

DATA SOURCES AND LIMITATIONS

DUI Arrest Data:

Arrest data are reported to the Department of Justice (DOJ), Law Enforcement Information Center, by individual law enforcement agencies throughout the state. As such, these data are subject to reporting errors such as incorrect names, birthdates or arrest dates. Nonreporting of arrest data due to error or omission can also occur; for example, in 1995 the Oakland Police Department reported no DUI arrests, after reporting 960 such arrests in 1994. In addition, when data are entered into DOJ's Monthly Arrest and Citation Register (MACR) system, only the highest-order offense is included. Therefore, in cases where a DUI arrest is made in conjunction with, for example, an auto theft arrest, that DUI arrest will not be included in the database. This results in a slight but systematic underreporting of the number of DUI arrests annually.

DUI Conviction Data:

Abstracts of conviction for DUI and other traffic-related offenses are reported to the DMV by courts throughout the state. As abstracts are received (either hard copy, magnetic tape or through direct electronic access from the courts) they are entered onto the DMV driver record database. Abstracts without an identifying driver license number are run through the automated name index (ANI) system in order to match the abstract with an existing driver record; in cases where no such match can be made, an "X" numbered record is created to store the abstract. The total number of DUI abstracts of conviction received by DMV from the courts is tallied monthly and annually. Since this workload total includes abstracts which amend, correct or dismiss prior abstracts of conviction, it tends to overestimate the actual number of convictions which have occurred. Conviction data are also subject to reporting and nonreporting errors similar to those for DUI arrests. For example, the 1993 Annual Report of the California DUI Management Information System documented that thousands of DUI convictions showing in court records do not appear on the DMV driver record database.

Alcohol-Involved Accident Data:

Accident data are reported to the California Highway Patrol (CHP) by local law enforcement agencies and district offices of the CHP. As such, these data are subject to reporting and nonreporting errors similar to those occurring in both DUI arrest and conviction data. While most local law enforcement agencies will investigate and file reports on accidents involving injury or death, the investigation and reporting of property-damage-only accidents varies widely by local jurisdiction. Data are entered onto CHP's Statewide Integrated Traffic Records System (SWITRS) and output in annual published reports.

GLOSSARY

ADMINISTRATIVE PER SE (APS)

Administrative per se ("on-the-spot") license suspension or revocation occurs immediately pursuant to lawful arrest of a person driving with a blood alcohol concentration (BAC) of 0.08% or more, or one who refuses a chemical test. Upon arrest, the driver's license is immediately confiscated by the law enforcement officer and an order of suspension or revocation served. The driver is issued a temporary license and allowed due process through administrative review. In July 1990, California became the 28th state to implement APS. In January 1994, California enacted a "zero tolerance" statute which requires the administrative suspension of any driver under age 21 with a BAC of 0.01% or greater, or who refuses to be tested.

ALCOHOL-INVOLVED ACCIDENT

Alcohol-involved accidents are those in which the investigating law enforcement officer indicates on the accident report that the driver "had been drinking (HBD)." Accidents involving drivers who are determined to be under the influence of drugs other than alcohol (typically less than 1% of all accidents) are also included in the alcohol-involved accident category.

ALCOHOL-RELATED RECKLESS DRIVING

Commonly called a "wet" reckless, alcohol-related reckless driving refers to an arrest/conviction incident which originated as a DUI arrest. DUI arrests involving drugs which are reduced to reckless driving are also referred to as alcohol-involved or "wet" reckless driving. "Wet" reckless convictions count as priors for the purposes of enhanced penalties upon subsequent conviction of DUI.

ALPHA

Alpha is the investigator's acceptable risk or probability level of making a Type 1 error (generally chosen to be small-e.g., 1% or .01, 5% or .05). There is always some risk of a Type 1 error, so alpha cannot be zero. Alpha is also called the significance level, because it is the criterion for claiming statistical significance.

BAC

Blood alcohol concentration, or BAC, is a measure of the percent, by weight, of alcohol in a person's blood. Statutorily, BAC is based upon grams of alcohol per 100 milliliters of blood or per 210 liters of breath.

CONVICTION

Conviction of an offense, as used in this report, refers to the receipt by DMV of a court abstract of conviction. In a small proportion of cases, an offender may be convicted of an offense but that conviction is not reported to DMV. Such cases would functionally be treated by DMV as though the offender had not been convicted. Because convictions can be amended, corrected, dismissed or simply not reported at all, the conviction totals reported herein are dynamic and subject to change.

COVARIATE

A variable used to statistically adjust the results of an analysis for differences (on that variable) existing among subjects prior to the comparison of treatment effects.

DUI

DUI is an acronym for "driving under the influence" of alcohol and/or drugs, a violation of Sections 23152 or 23153 of the California Vehicle Code.

LOGISTIC REGRESSION

Logistic regression analysis is a statistical procedure evaluating the linear relationship between various factors and the occurrence or nonoccurrence of an outcome event. In this study, the procedure was used to explain the relationship between the various sanctions and the proportion of DUI offenders who incurred accidents and/or DUI incidents.

MAJOR CONVICTION

Major convictions include primarily DUI convictions, but also reckless driving and hit-and-run convictions.

p stands for probability. For example, if p < .05, the probability is less than 5 chances in 100 that the difference you found is by chance alone.

QUASI-EXPERIMENTAL DESIGNS

Quasi-experimental designs refer to analyses where the comparison groups are not equivalent on characteristics other than the treatment conditions because random assignment was not used. Caution should be excercised when interpreting the results because of possible confounding of group bias with treatment effects. Covariates are used to statistically reduce group differences prior to the comparison of treatment effects.

SIGNIFICANT (STATISTICALLY)

If the result of a statistical test is significant, this means that the difference found is very unlikely by chance alone. <u>How</u> unlikely is determined by alpha.

APPENDIX A

Assembly Bill No. 757

CHAPTER 450

An act to add Section 1821 to the Vehicle Code. relating to driving offenses.

(Approved by Governor September 14, 1989. Filed with Secretary of State September 15, 1989.)

LEGISLATIVE COUNSEL'S DIGEST

AB 757, Friedman. Driving offenses: intervention programs: evaluation.

Under existing law, the Department of Motor Vehicles maintains records of driver's offenses reported by the courts. Including violations of the prohibitions against driving while under the influence of an alcoholic beverage, any drug, or both, driving with an excessive blood-alcohol concentration, or driving while addicted to any drug.

This bill would, additionally, require the department to establish and maintain a data and monitoring system, as specified, to evaluate the efficacy of intervention programs for persons convicted of those violations relating to alcohol and drugs, and to report thereon annually to the Legislature.

The bill would declare legislative findings.

The people of the State of California do enact as follows:

SECTION 1. The Legislature finds and declares as follows:

- (a) Drivers under the influence of drugs or alcohol continue to present a grave danger to the citizens of this state.
- (b) The Legislature has taken stern action to deter this crime and punish its offenders and has provided a range of sanctions available to the courts to use at their discretion.
- (c) No system exists to monitor and evaluate the efficacy of these measures or to determine the achievement of the Legislature's goals.
- (d) This lack of accurate and up-to-date comprehensive statistics hampers the ability of the Legislature to make informed and timely policy decisions.
- (e) It is essential that the Legislature acquire this information, from available resources, as soon as practicable, and that this information be updated and transmitted annually to the Legislature.

SEC. 2. Section 1821 is added to the Vehicle Code, to read:

1821: The department shall establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted of violations of Section 23152 or 23153.

The system may include a recidivism tracking system. The recidivism tracking system may include, but not be limited to, jail sentencing, license restriction, license suspension. Level I (first offender) and II (multiple offender) alcohol and drug education and treatment program assignment, alcohol and drug education treatment program readmission and dropout rates, adjudicating court, length of jail term, actual jail or alternative sentence served, type of treatment program assigned, actual program compliance status, subsequent accidents related to driving under the influence of alcohol or drugs, and subsequent convictions of violations of Section 23152 or 23153.

The department shall submit an annual report of its evaluations to the Legislature. The evaluations shall include a ranking of the relative efficacy of criminal penalties, other sanctions, and intervention programs and the various combinations thereof.

¹These may include abstract deletions due to failure to appear (FTA) at the court hearing.

²These 1996 arrestees showed prior DUIs declared unconstitutional on their records. The courts reported here are those of the current DUI conviction and not necessarily those in which a prior conviction was declared unconstitutional.
